SUMMARY

Backend-focused Software Development Engineer with 1+ year of experience building scalable B2B and B2C applications using Java, Spring Boot, React, Node.js, MySQL, PostgreSQL, Redis, and RabbitMQ. Currently leading engineering team working on an enterprise-grade, multi-tenant messaging platform. Experienced in microservices, REST APIs, authentication, real-time messaging, billing, payment integrations, caching, and asynchronous processing. Strong understanding of system design, Docker, WebSockets, distributed systems, and production-grade software development.

WORK EXPERIENCE

Software Development Engineer I (Java Full-Stack Developer), GenceeSoft Innovations 06/2026 – Present | Hyderabad

- Leading a engineering team building BliQ, an enterprise-grade, multi-tenant messaging platform using Java, Spring Boot, React, Redis, RabbitMQ, MySQL, and MongoDB.
- Developing scalable WhatsApp, SMS, real-time chat, broadcast campaign, billing, VoIP, and Google Contacts synchronization features.
- Optimized queue-based broadcast processing through batching and database-query reduction to support large-volume and concurrent campaigns.
- Designed secure authentication, WebSocket event flows, billing workflows, and integrations across distributed microservices.
- Driving technical planning, task allocation, code reviews, debugging, testing, and end-to-end delivery of production features.

Software Engineer, Turbostart 03/2025 – 05/2026 | Bangalore

- Worked as a Full Stack Engineer across scalable web and mobile applications for multiple B2B and B2C client products.
- Delivered 10+ production-grade client projects end-to-end, contributing to backend services, REST APIs, frontend systems, deployment pipelines, and production releases.
- Designed and developed scalable backend architectures, authentication systems, business workflows, and payment integrations using Java Spring Boot, Node.js, PostgreSQL, and Redis.
- Built responsive and high-performance frontend applications using React.js and modern JavaScript frameworks.
- Worked on caching strategies, database optimization, cloud deployments, reverse proxy configuration, and containerized environments using Docker and Nginx.
- Collaborated directly with clients, designers, and cross-functional engineering teams to deliver production-ready features within deadlines.

PROJECTS

BliQ Messaging 06/2026 – Present

BliQ is an enterprise-grade, multi-tenant communication platform supporting WhatsApp, SMS, VoIP, real-time chat, broadcast campaigns, contact synchronization, billing, and usage management.

- Led a three-member engineering team and contributed to architecture, development, code reviews, testing, and production delivery.
- Built scalable messaging workflows for inbound and outbound messages, media, reactions, read receipts, interactive messages, and delivery-status tracking.
- Optimized queue-based broadcast processing using batching and reduced database queries to handle large-volume concurrent campaigns.
- Developed billing, authentication, Google Contacts synchronization, WebSocket events, and phone-level VoIP configuration features.
- Tech Stack: Java, Spring Boot, React, MySQL, MongoDB, Redis, RabbitMQ, WebSockets, Docker, and REST APIs.

Techflu – Tech Rental Platform (B2B & B2C) 01/2026 – 05/2026

Tech rental platform supporting individual customers and enterprise bulk rental operations.

Developed scalable backend services using NestJS, PostgreSQL, Redis, queues, and cron jobs for handling inventory reservations and rental workflows.

Implemented booking systems, payment integrations with Razorpay/AutoPay, order management, and real-time inventory tracking.

Built admin and delivery partner management systems for order tracking, KYC approvals, delivery workflows, and operational management.

Integrated Digio Aadhaar verification and Amazon S3 storage for secure proof and document management.

Designed discount systems, promo code workflows, and scalable order-processing pipelines.

Tech Stack

NestJS, PostgreSQL, Redis, BullMQ, Docker, Razorpay, Amazon S3

Reusable Multi-Tenant Identity Platform (IDP) 01/2026 – Present

- Developed a scalable multi-tenant Identity Provider (IDP) supporting JWT authentication, OTP login, Google OAuth, and role-based access control.
- Designed centralized authentication architecture with reusable APIs and user management features using Java Spring Boot, PostgreSQL, and React.js.

EDUCATION

Bachelor of Science (B.Sc), GMS Academy 10/2023

SKILLS

Languages: Java, JavaScript, Python, SQL, Ruby, Go (Learning), **Frontend:** React.js, Next.js, **Backend:** Spring Boot, Node.js, FastAPI, Ruby on Rails, **Databases:** PostgreSQL, MongoDB, Redis, VectorDB, **Tools:** Git, Docker, Nginx, Postman, **Concepts:** Data Structures & Algorithms, System Design, REST APIs

ACHIEVEMENTS & CERTIFICATIONS

Achievements

- Selected for a Java Full-Stack SDE role originally requiring 3–5 years of experience, based on strong performance in coding, backend development, and system design.
- Solved 200+ Data Structures & Algorithms problems
- Delivered 10+ real-world projects at Turbostart
