

Renuka Prasad M S

Software Engineer

renukaprasadms00@gmail.com | +91 7022129610 | github.com/renukaprasad-ms | linkedin.com/in/renuka-prasad-m-s

SUMMARY

Results-driven Software Engineer with 1+ year of experience building scalable full-stack and mobile applications for real-world clients. Delivered 10+ production-grade client projects with strong expertise in backend development, REST APIs, system design, and cloud technologies. Proficient in designing scalable architectures, optimizing performance, and building reliable systems with solid Data Structures & Algorithms fundamentals. Passionate about solving complex engineering problems and developing high-quality software solutions.

WORK EXPERIENCE

Turbostart *Software Engineer* 03/2025 – Present | Bangalore

- Worked as a Full-Stack Engineer across scalable web and mobile applications (Android & iOS) for real-world B2B and B2C products
- Delivered 10+ client projects end-to-end, contributing to backend systems, APIs, frontend development, deployment, and production delivery
- Designed and developed scalable backend architectures, REST APIs, authentication systems, payment integrations, and business workflows
- Built responsive and high-performance user interfaces using React.js and modern frontend technologies
- Worked on cloud deployment, database design, caching, and system optimization to improve scalability and reliability
- Collaborated directly with clients and cross-functional teams to deliver production-grade applications and features on time
- Applied strong Data Structures & Algorithms and system design fundamentals to build efficient and maintainable solutions

PROJECTS

Techflu – Tech Rental Platform (B2B & B2C) 05/2026 – Present

- Developed a scalable B2B and B2C tech rental platform for renting laptops, desktops, and other devices, supporting both individual users and bulk enterprise orders using NestJS, PostgreSQL, Redis, queues, and cron jobs.
- Implemented inventory reservation, booking workflows, Razorpay payment/AutoPay integrations, and scalable order processing systems for real-time rental operations.
- Built delivery partner and admin management systems with features for product management, order tracking, delivery operations, KYC approval workflows, and user management.
- Integrated Digio for Aadhaar verification, Amazon S3 for proof image storage, and implemented student promo code and discount systems across the platform

Self-Hosted Home Server Platform (Personal Cloud Infrastructure) 01/2026 – Present

- Built a self-hosted cloud infrastructure platform using Docker, Nginx, Cloudflare, and MinIO to deploy and manage multiple services with secure public access.
- Designed reverse proxy routing, containerized deployments, and S3-compatible object storage focusing on scalability, networking, and infrastructure management.

Cloudverse – Cloud Management & FinOps Platform 01/2026 – 04/2026

- Contributed to a cloud management and FinOps platform, primarily working on the Chargeback module for pool-based cost allocation, shared/direct cost distribution, and ledger-based cost tracking across cost centers.
- Built scalable backend services using NestJS, GraphQL, Prisma ORM, PostgreSQL, ClickHouse, Redis, and Apache Airflow for automated cost processing and analytics.

AuraML – Multi-Tenant SaaS & Identity Platform 06/2025 – 09/2026

- Developed a multi-tenant SaaS platform enabling organizations to manage employees and access multiple products through a unified login system.
- Built scalable user and role management services using Django, React.js, PostgreSQL, and Keycloak with RBAC, SSO, LDAP integration, and multi-tenant architecture support.
- Implemented subscription-based and token-based product access with wallet functionality and Razorpay payment integration for secure authentication and seamless cross-product user experience.

Realm – Real Estate Mobile Application

Developed a cross-platform real estate mobile application for Android and iOS enabling users to explore residential and commercial properties and schedule appointments with property dealers. Built the application using Ionic Capacitor with Android Studio and Xcode, contributing to mobile features, API integrations, UI flows, and deployment workflows.

EDUCATION

Bachelor of Science (B.Sc), GMS Academy 2024

SKILLS

Languages Java, JavaScript, Python, SQL, Go (Learning)	Frontend React.js, Next.js	Backend Spring Boot, Node.js, FastAPI	Databases PostgreSQL, MongoDB
Tools Git, Docker, Nginx, Postman	Concepts Data Structures & Algorithms, System Design, REST APIs		

ACHIEVEMENTS & CERTIFICATIONS

Achievements

- Solved 200+ Data Structures & Algorithms problems
- Delivered 10+ real-world projects at Turbostart

Certifications

- NASSCOM Certification
- Full Stack Development – BoscoCoder (MAANG-led program)
